BRIF INTRODUCE OF 800-1000KGH OUTPUT HIGH PRODUCTIVITY INSTANT RICE PRODUCTION LINE WITH SIEMENS ABB

As a professional food product processing machine factory, our artificial rice production line made of stainless steel. And the raw material of the rice can use rice flour, black rice, buckwheat and other grains (broken rice and rice bran can be reused) as raw materials to produce high-quality enriched artificial rice.

PRODUCTS DESCRIPTION OF 800-1000KGH OUTPUT HIGH PRODUCTIVITY INSTANT RICE PRODUCTION LINE WITH SIEMENS ABB

Artificial rice is a new food based on extrusion technology. For the rice production line, we dopte rice flour as main raw material, artificial rice is made by extrusion and drying processes. Artificial rice has the advantages of great taste, easy-to-cook, eutrophy, strong functionality (such as sugar-free rice, medicinal rice) etc. Right now, more and more consumers and units received artificial rice. This nutritional rice food machine adopts rice, black rice, buckwheat and other grains(broken rice and rice bran can be reused). You can add additional nutrient components, such as vitamins, minerals etc. After extruding, forming and drying, you can get the nutritional artificial rice, which is eaten same as natural rice

This Artificial Rice Making Machine Line can produce many kind shapes and differencnt color artificial rice by changing the mould and formula.

MORE DETAILS ABOUT 800-1000KGH OUTPUT HIGH PRODUCTIVITY INSTANT RICE PRODUCTION LINE WITH SIEMENS ABB

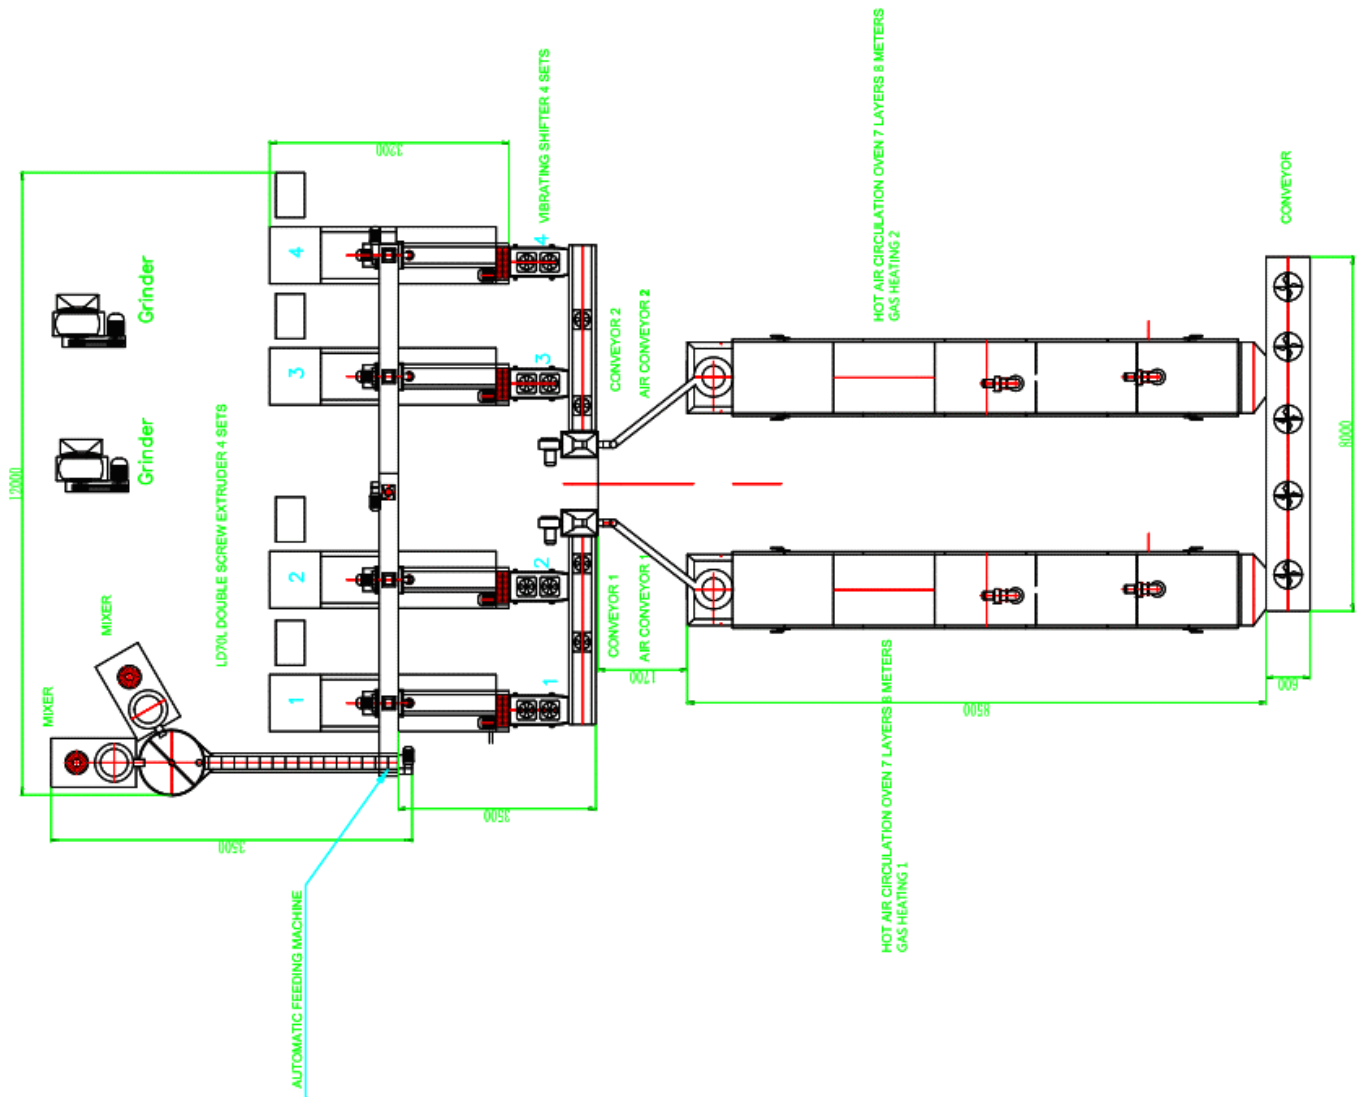

1. Capacity: 100kg/h, 200kg/h, 300kg/h, 500kg/h, 1000kg/h
2. Consumption: Low electricity and labor consumption
3. Design: With flexible design based on the client's demands, we provide turn key project.
4. Grade: SUS304

FUNCTION OF EACH MACHINE OF INSTANT RICE PRODUCTION LINE

1. Flour mixing machine: separate rice noodles or mix with some additives, add a certain amount of water and mix well.
2. Feeding machine: the motor is used for screw conveying, and the mixed raw materials are conveyed to the feeding hopper of the extruder to ensure convenient and fast feeding.
3. Extruder: There is a special control cabinet, which can extrude rice particles under high pressure environment, adjust the process and change the mold to produce rice grains of different shapes.
4. Vibrating screen: The extruded particles contain a little temperature and viscosity, and the particles are spread out through the vibrating screen to avoid sticking together.
5. Air conveyor: transport products to the oven, and the height of the hoist is determined according to the oven.

FUNCTION OF EACH MACHINE OF INSTANT RICE PRODUCTION LINE

6. Multi-layer oven: the oven is mostly electric oven, the temperature is adjusted between 0-200 degrees through the control cabinet, the inside is stainless steel double-layer mesh bag, the baking time can be adjusted according to the speed, minus the particle moisture, and increase the shelf life.

7. Cooling conveyor: The dried particles contain a certain temperature, and the packaging quality can be guaranteed by cooling to room temperature.

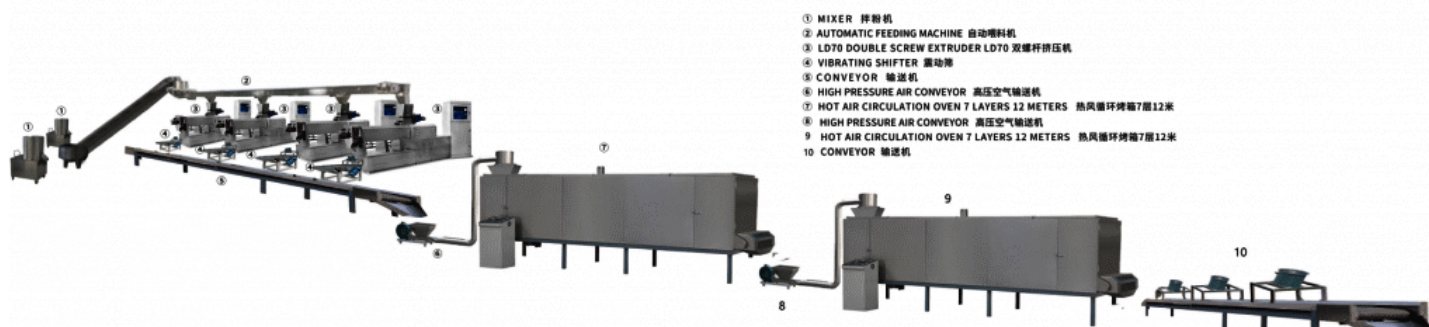

We also equip a automatic feeding system for the instant rice production line. Here are the functions for your reference:

?1?This auto feeding machine feeds many extruder feeders.

?2?The discharge hole adopts a pneumatic valve to match the sensor probe, and it opens and closes automatically.

?3?Automatic feeding system always have raw materials, and a red sensor probe inside.

The probe can automatically detect how much raw material is in the feeder of extruder. When the raw material in the feeder is insufficient, the red probe will sense it, and then feed valve automatically open and unload.

Customer Purchase Case Of Full Automatic Instant Rice Processing Line

Customer cases for Industrial Instant Rice Making Machine Fortified Rice Processing Line for factory in 2021	
1	200kg/h cost of Industrial Instant Rice Making Machine sold in russia
2	1t/h Industrial Instant Rice Making Machine for sale in puerto rico agent
3	500kg/h Industrial Instant Rice Making Machine for sale in bolivia
